

Leading *with* Leading-Edge SolutionsSM

Advanced coatings—all designed with your needs in mind

For over half a century the name Dayton Progress has been synonymous with metal stamping excellence and leadership. Why? Because we engineer, develop, and deliver quality products and support services that solve problems. Your problems.

For example, Dayton is the industry's technology leader with the largest selection of state-of-the-art coatings. Coatings that increase the life of your products, improve throughput—and give you that all-important competitive edge. In-house/other coatings include:

- **TiCN (Titanium Carbonitride)**—a harder-than-carbide (Vickers 3000) PVD film that comes standard on all VersaPlus® products. Ideal for punching aluminum, galvanized, and stainless steels.

- **DayTiN® (Titanium Nitride)**—a hard-as-carbide (Vickers 2300) PVD coating. General purpose coating for mild steels.

- **DayTAN™ (Titanium Aluminum Nitride)**—an ultra-hard (Vickers 3400), high-aluminum PVD coating. Absorbs shear stress, and provides high-temperature toughness. Well-suited for HSLA, dual-phase, and TRIP steels.

If you'd like to know more about these coatings or other examples of Dayton's leading-edge solutions, contact your local Dayton Progress distributor today.
